Using build-in bluetooth module of Toshiba Tecra M2 Notebook:

Download this file: [toshiba\\_acpi.c](#)

and replace it with the file `toshiba_acpi.c` in your kernel source tree (e.g. `/usr/src/linux/drivers/acpi`).

Tested with `gentoo-dev-sources-2.6.11-rX`

To enable it execute following commands:

```
echo 'power:1' > /proc/acpi/toshiba/bluetooth
sleep 1
echo 'attach:1' > /proc/acpi/toshiba/bluetooth
```
